

Poultry

Chicken output from the week ending September 17th was 3.4% less than the same week last year. This follows the June through August period where monthly chicken production was just .4% larger than 2015. However, improved margins for chicken producers are expected to lead to better year over year gains in chicken output during the fall. The broiler type chick hatch during August was 1% larger than 2015. Further, the broiler layer flock expanded during the month for the first time since March. These statistics affirm projections for solid chicken output expansion versus the prior year in the coming months. August 31st chicken wing stocks were 34% larger than last year. The wing markets could remain firm during October.

Product Description	Market Trend	Supplies	Price vs. Last Year
Whole Birds (2.5-3 GA)	Decreasing	Good	Lower
Wings (whole)	Decreasing	Good	Lower
Wings (jumbo cut)	Increasing	Good	Higher
